Software Quality Assurance Engineer

🏠 Islamabad, Pakistan

Quality Assurance Engineer with 4+ years of hands-on experience building and maintaining UI and API automation frameworks, executing risk-based and context-driven testing strategies, and assuring software quality across operationally critical systems. Proficient in Playwright, Selenium, and Cypress for UI automation, and Python/JavaScript/Java for framework development, integrated into CI/CD pipelines. Skilled in owning end-to-end test strategies spanning functional, automation, and non-functional quality dimensions, feeding production incidents back into regression design to prevent recurrence. Actively leverages AI-assisted tools for generative test creation and QE workflow optimisation.

Education

International Islamic university, Islamabad

Sep 2017 – Dec 2021

BS Software Engineering, 3.5 CGPA

Skills, Tools & Technologies

- **Skills:** Manual & automation testing, API testing & automation, Mobile & Web Testing, Database testing, Performance testing, IoT testing, embedded systems testing
- **Tools & Frameworks:** Playwright, Selenium/WebDriver, Cypress, Cucumber/Gherkin, Pytest, JMeter, Postman, Jenkins, AWS, GitHub, Jira
- **Domains:** Security & Compliance, Payments, Healthcare, Construction Management, & other SaaS Platforms
- **AI Models & Tools:** Claude, Cursor, ChatGPT, Gemini, Antigravity, MCPs (Playwright, Jira, GitHub Copilot)
- **Programming languages:** Python, Javascript, Java
- **Languages:** English (Professional), Urdu , Arabic (Conversational), Pashto

Experience

Embrace IT Technologies ApS

Apr 2026 – Present

Senior QA Engineer

- Owned end-to-end test strategies for multiple initiatives, covering functional, automation, non-functional, and environment/data needs aligned to a Test Like Ops approach – prioritising user journeys and failure paths by business impact and operational risk.
- Built and maintained UI automation frameworks using Playwright and API automation harnesses using Python (pytest/requests), integrated into CI/CD pipelines for fast, reliable feedback on every build.
- Delivered non-functional testing covering performance baselines, resilience under degraded dependencies, and observability checks using JMeter, ensuring system behaviour was validated under realistic operational conditions.
- Applied risk-based and context-driven testing heuristics alongside exploratory testing to uncover defects beyond scripted coverage, questioning assumptions early and challenging system readiness before release.
- Fed production incidents back into regression design to prevent recurrence of failures, continuously improving the automation suite to reflect real-world failure patterns.
- Leveraged AI-assisted generative test creation tools and MCP-based workflows to accelerate test case development, improve coverage efficiency, and surface risks earlier in the delivery cycle.

SeQuenX b.v.

Jun 2023 – May 2026

SQA Engineer

- Collaborated with architects, software engineers, and product owners to translate complex functional and non-functional requirements into concise test strategies, providing early risk feedback on design and delivery decisions.
- Developed and maintained UI automation scripts using Selenium/WebDriver and Cypress, and built API automation suites using Postman and Python, integrated into CI/CD pipelines for continuous quality feedback.
- Executed performance and load testing using JMeter to validate system behaviour under realistic operational load, identifying resilience issues and working with development teams to optimise application throughput.
- Held vendor-delivered components to defined entry/exit and acceptance criteria, demanding operationally meaningful evidence of readiness rather than accepting completion claims at face value.

- Liaised with cross-team stakeholders to manage testing of cross-dependencies, ensuring quality metrics and test results fed accurately into programme dashboards and release decision gates.
- Participated in Agile ceremonies including stand-ups, sprint reviews, and retrospectives, delivering regular testing status updates and quality risk assessments to technical teams and stakeholders.

Assistech Solutions

Sep 2022 – May 2023

QA Engineer

- Designed and executed risk-based test strategies for Hireboard's enterprise platform, prioritizing high-impact business workflows including structured meeting cadences, performance assessment pipelines, and organizational alignment tools.
- End-to-end tested critical transactional and operational lifecycles, ensuring the integrity of complex contract creation flows, payins/payouts, and robust employee leave management systems.
- Applied rigorous exploratory testing alongside scripted execution to uncover edge cases, data discrepancies, and system weaknesses across multi-tenant financial and HR flows.
- Contributed to quality metrics reporting and participated in Agile ceremonies, tracking defect slippage and automation pass rates to provide stakeholders with evidence-based release confidence.

Internships

NaxTech

Apr 2022– Jul 2022

QA Internee

- Executed functional, regression, and exploratory test cases for web and mobile applications, applying risk-based prioritisation to focus testing effort on the highest-impact user journeys.
- Contributed to API test execution and defect tracking, documenting issues with detailed reproduction steps, severity assessments, and environment conditions to support fast developer resolution.
- Collaborated with senior QA engineers to develop test plans and automation scripts, gaining hands-on experience with Selenium-based UI automation and CI/CD-integrated test execution.
- Participated in daily Agile stand-ups, reporting testing progress and surfacing blockers early to maintain sprint velocity and release quality.
- Developed and maintained a reusable test case repository to support regression testing continuity across future release cycles.
- Engaged in exploratory testing sessions to uncover hidden defects and failure paths not addressed by scripted test scenarios.

Notable Projects

Automation with Cypress Using Javascript | Github link

- **Topics Covered:**
- All Kinds of Locators
- Test Suit, Hooks, Tags
- Implicit & explicit Assertions
- Fixture Usage, Data-Driven Testing
- Screenshots & Video on Test Failure
- Custom Commands: Extending Cypress functionality for tailored testing needs
- Page Object Model
- HTML Report Generation

Automation with Selenium Using Python | Github link

- **Topics Covered:**
- Locators: CSS & XPATH axes
- Waits: Implicit & explicit.
- Browser & Navigational Commands
- Screenshots
- Mouse & Keyboard Actions
- Handling Dropdowns, Popups & Alerts

- IFrames & Nested IFrames
- Browser Windows Tabs
- Date Picker Tables
- Data-Driven Testing
- Database Operations using MySQL

My Other GitHub projects I have Worked on | Click individual projects to visit the codebase

- Automation Using Playwright
- API testing Using Cypress
- Guide to JMeter
- Google Calculator Automation
- Python for beginners
- Pytest
